# HOW 2 BUY

This manual is designed to mimic the layout of a standard Android smart phone. That being said the procedure is more or less the same on the Apple iPhone platform.

This manual will guide you through three basic procedures.

1. downloading the TRUST wallet app from Google Play (Android's AppStore).
2. Setting up a TRUST wallet account
3. Using the Trust App and an e-mail account (in this case we are using gmail) to exchange USD into bLC (bLOCKcoin).

To follow along, simply click on the actual tablet wherever you see a red ellipse in the manual.

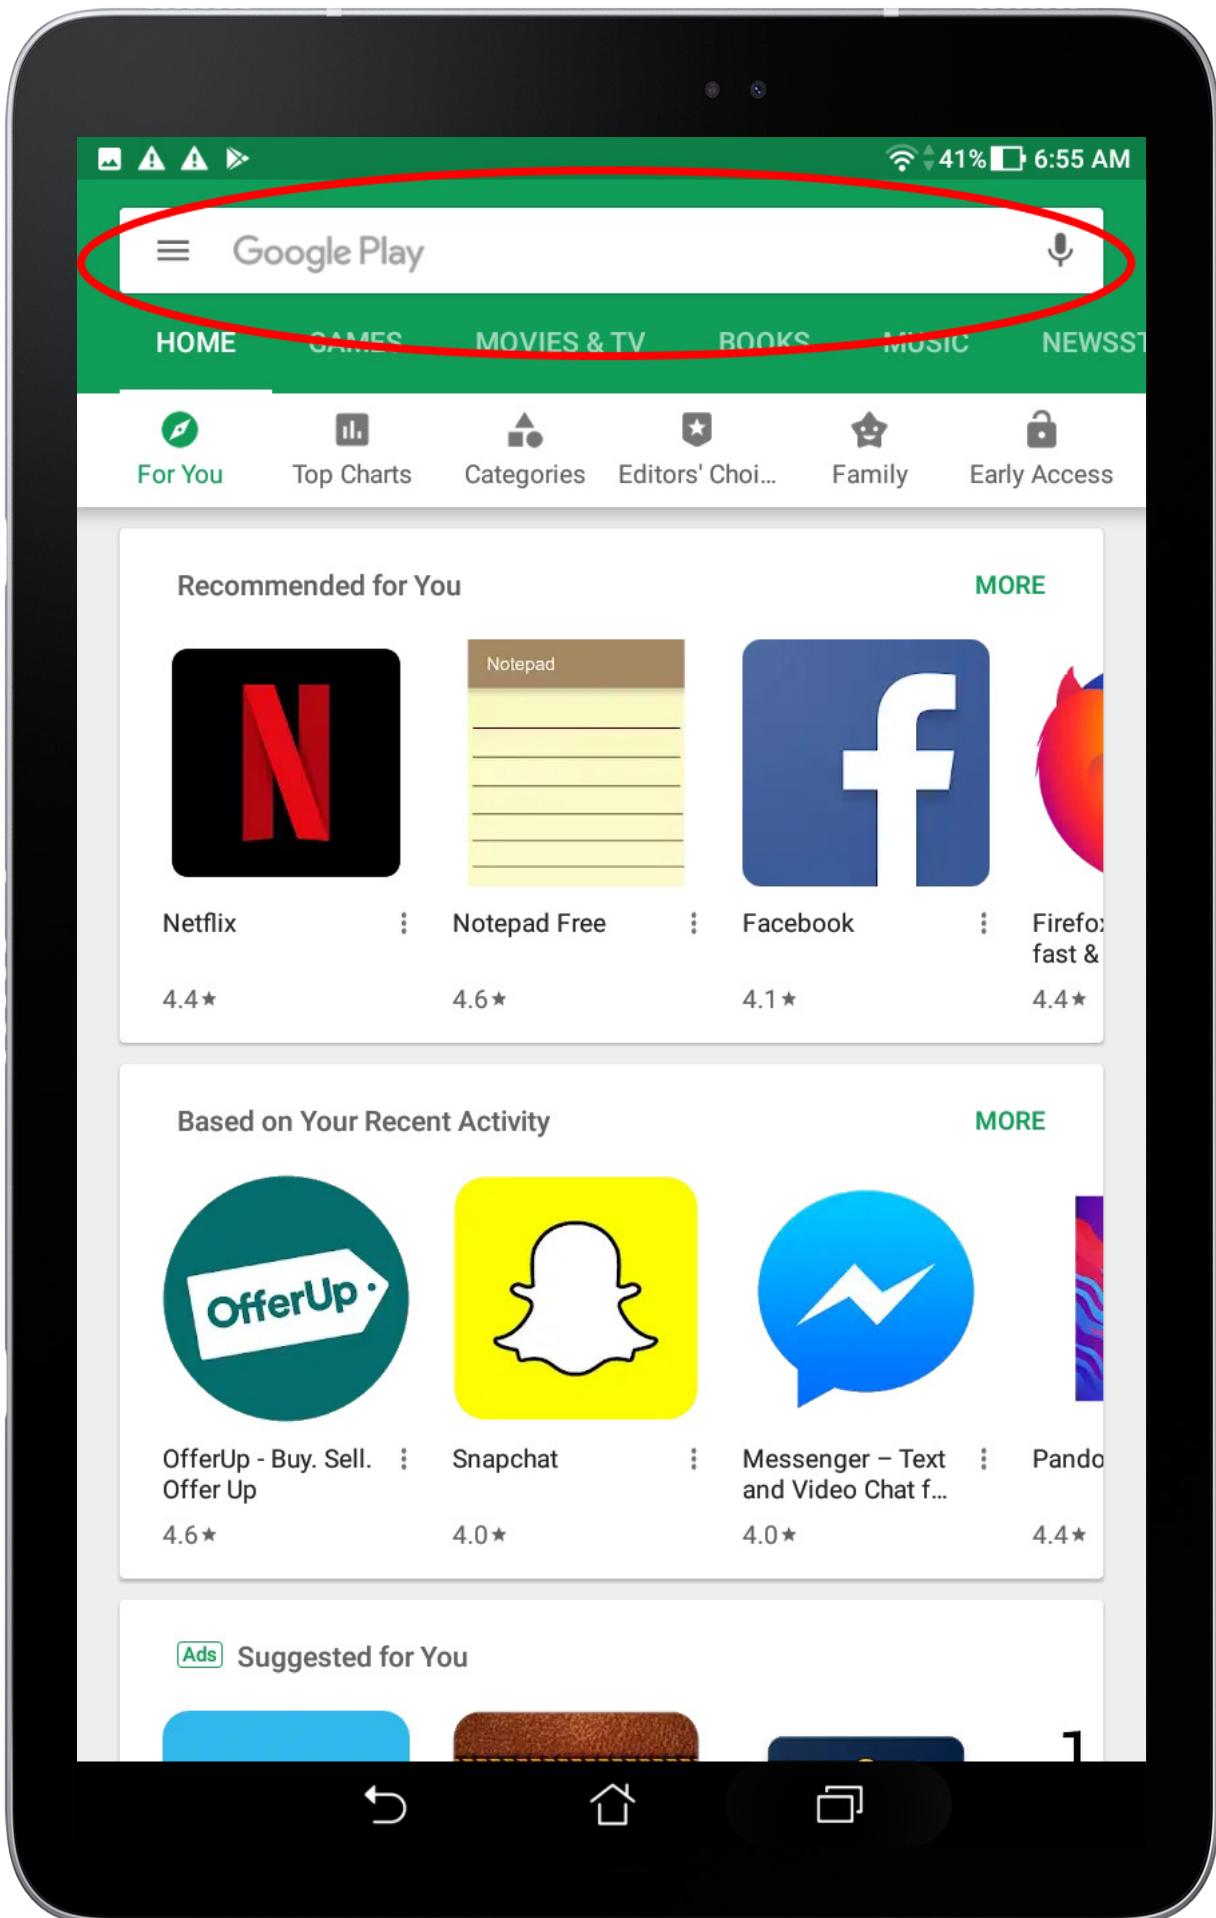

Instructions appear as red texts inside of red text boxes.

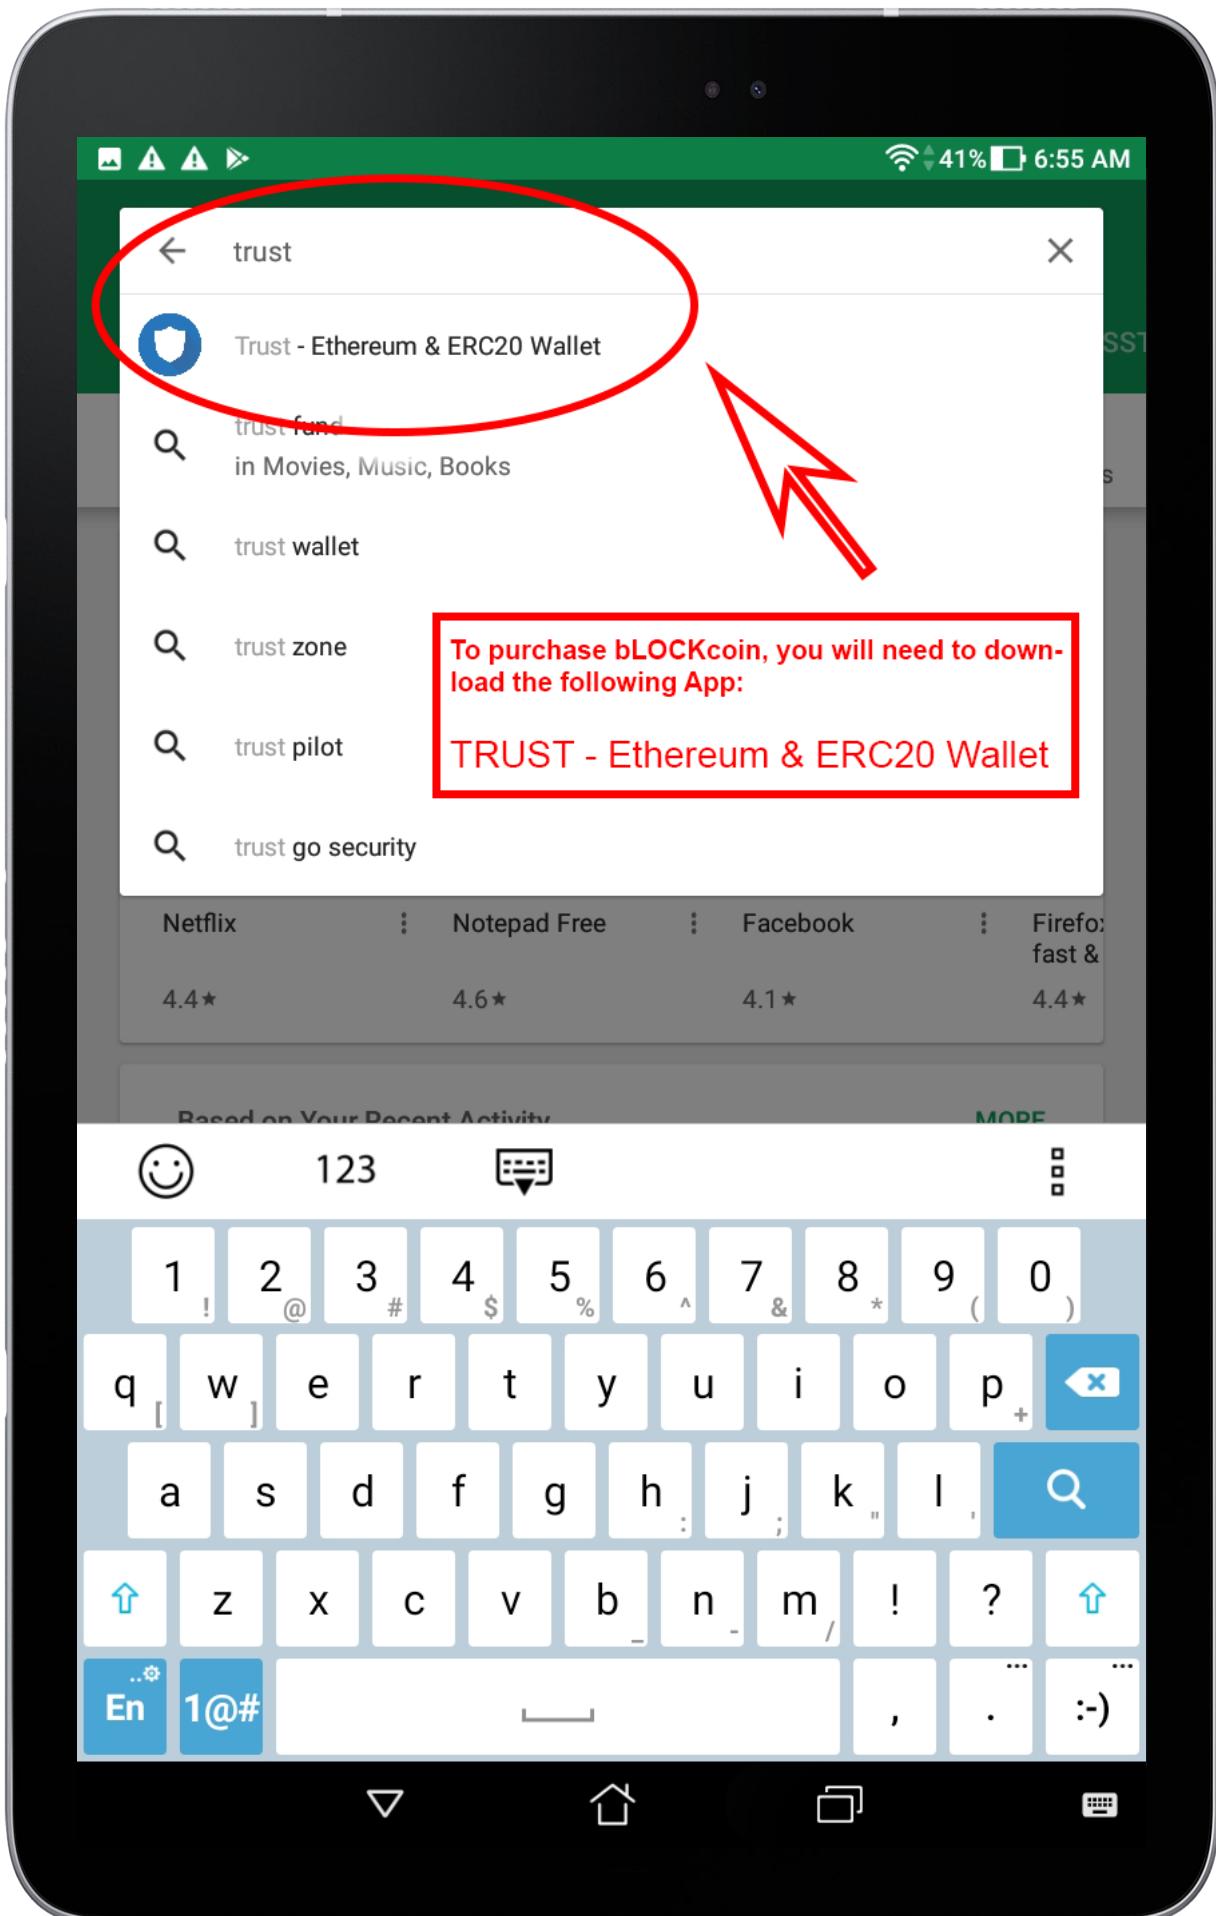

Please note that you must visit the Gaylord Building in Lockport Illinois in order to exchange your physical USD into digital bLC.

GOOD LUCK!

## Backup Phrase

You must save these words somewhere safe as it will be the only way to recover your account. You must also know the correct order of the words. Feel free to write them down on a piece of paper, and/or use the COPY button to save them digitally.

Do not share this with others. You will notice our example has the words blurred out for this very reason.

These 12 words are the only way to restore your Trust wallet.

Save them somewhere safe and secret.

## Verify Backup Phrase

SKIP

Tap the words to put them next to each other in the correct order.

TRUST will prompt you to arrange your words in their correct order to help make sure that you have in fact saved your phrase somewhere safe.

Once you have completed the exercise, click DONE.
